Restriction to one of the following inventions is required under 35 U.S.C. §121:

- I. Claims 1-6, drawn to an amino acid which contains NMR "active" and NMR "inactive" nuclei.
- II. Claim 7, drawn to a culture medium.
- III. Claim 8, drawn to a protein that contains the amino acid of Group I.
- IV. Claims 9-10, drawn to methods of using the protein of Group III.
- V. Claim 11, drawn to a method of using the amino acid of Group I.

The claimed inventions are distinct.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed.

Inventions III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP 806.05(h)). Similarly, inventions V and I are related as process of making and product made.

Notwithstanding the foregoing, in the event that Group I is elected, and claims therein found allowable, Groups II and V will be rejoined therewith for further examination.

Finally, Groups I and III are related as mutually exclusive species in intermediate-final

product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP section 806.04(b), 3rd paragraph), and the species are patentable distict (MPEP section 806.04(h)).

In the instant case, the amino acids are deemed to be useful as such and the inventions are deemed patentably distinct since there is nothing on the record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentable distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103 of the other invention.

On reason for the distinction between Groups I and III steps from the route of synthesis.

One could use a bacterial culture to produce a peptide or protein containing NMR active nucleus such as ¹⁵N or ¹³C; a single amino acid within this peptide or protein would not necessarily be obvious. In the event that Group I is elected, and claims therein found allowable, claim 8 may or may not be rejoined therewith, depending on what transpires during prosecution.

Applicant is advised that for the response to this requirement to be complete, an election of the invention to be examined must be indicated, even if the requirement is traversed (37 C.F.R. 1.143).

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).

In addition to the foregoing, applicants are required under 35 U.S.C. §121 to elect a disclosed specie for prosecution on the merits to which the claims shall be restricted if no

generic claim is finally held to be allowable.

Election is required of a specific and fully defined amino acid which (applicants believe) falls within the scope of claim 1 or 2. All nuclei should be accounted for, including the exchangeable protons (or deuterons) on the *alpha*-amino group. For example, applicants may choose to elect one of the following:

In the interest of advancing the prosecution, applicants should do hat of the following:

- (a) provide a listing of claims which they believe encompass the elected amino acid;
- (b) provide a reason as to why each of the claims asserted to encompass the elected amino acid do in fact encompass the same;
- (c) explain which of the deuterium atoms (in the elected amino acid) applicants believe to be NMR active and which NMR inactive, and
- (d) explain which of the protons (in the elected amino acid) applicants believe to be NMR active and which NMR inactive.

Clearly, there is a vast quantity of literature on proton NMR and a considerable amount on

deuterium NMR. Neither of these nuclei is NMR "inactive". However, applicants have adopted positions on this issue which are contrary to art-accepted meanings of the terms "active" and "inactive", and have adopted positions that are internally inconsistent as well. For example, claim 4 permits protons to be either active or inactive.

A complete response to the foregoing will help to advance the prosecution.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a generic claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are witten in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentable distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. > 103 of the other invention.

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. Process claims that depend from or otherwise include all the limitations of the patentable product will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of *In re Ochiai, In re Brouwer* and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder.

Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Lukton whose telephone number is 571-272-0952. The examiner can normally be reached Monday-Friday from 9:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cecilia Tsang, can be reached at (571)272-0562. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-272-1600.

DAVID LUKTON, PH.D. PRIMARY EXAMINER
